

## HIGH VI HYDRAULIC OILS

**Application:** Hydraulic systems in the industry, building and transport as well as agricultural. Hydraulic oils practically for all hydraulic systems as well as a lubricating oil for slide-and roller bearings, lathes, compressors, vacuum pumps, gearboxes, circulating systems, etc.

The choice of this oil type as well as the viscosity depends on the manufacturer's requirements

**Specifications:** DIN 51524 Part 3 Type HVLP and HLP

**Characteristics:**

**SPEC OIL HIGH VI** is a range of premium quality, very high viscosity index, anti-wear hydraulic oils specially formulated for use in hydraulic systems, which operate over a wide temperature range.

**SPEC OIL HIGH VI** oils are highly shear stable and have excellent anti-wear properties. TRUE HIGH VI oils possess good water and air separation properties.

**SPEC OIL HIGH VI** oils give more consistent hydraulic system response in many applications, which operate over a wide temperature, range due to their improved viscosity / temperature properties.

**Data:**

ISO Class	Density at 15°C	Visc. at 40°C mm <sup>2</sup> /s	Visc. at 50°C mm <sup>2</sup> /s	Visc. at 100°C mm <sup>2</sup> /s	Visc. at 0°C mm <sup>2</sup> /s	Visc. at 20°C mm <sup>2</sup> /s	Visc. Index min.	Flash Point °C	Pour Point °C
